Exploring Digitial Photography

Vocabulary	
photograph	A photograph is a picture that is made using a camera. When you take a photograph, the camera captures what you see in front of it, like people, places, or things, and keeps that image to look at later.
landscape/ portrait	A "landscape" orientation is when an image or page is wider than it is tall, just like a picture of a beautiful outdoor scene. A "portrait" orientation is when an image or page is taller than it is wide, similar to how you might take a picture of a person standing up.
digitial	Digital means anything that uses computers or technology to work.
framing	In digital photography, "framing" is creating a special window for your picture.
device	A "device" is a tool or gadget that helps people do things more easily.

Skills I need:

-Take a photograph using a simple camera
-Identify some of the reasons why a photograph may be good or bad
-Experiment when taking photos with different light sources
-Identify a photo that has been enhanced using tools when asked questions
use different tools to change how a photograph looks
