Computing Knowledge map
Making Music- Google Music Lab

Vocabulary	
open	"Open" means to start or launch a program, file, or application. When you "open" something on a computer, it means you're telling the computer to display or run it so you can use it.
edit	"Edit" means making changes or improvements to something you have created or are working on
create	When using a music program to "create," it is the process of making something new and original with sound. This can involve selecting different musical instruments, composing melodies, arranging beats, and layering various audio elements to craft a unique piece of music.
pattern	A musical pattern is a sequence of sounds or notes that repeat in a predictable way, creating a melody or rhythm.
notes	Musical notes are like the alphabet of music. Just as letters are used to make words, musical notes are used to create songs. Each note represents a specific sound, and they can be high, low, long, or short.
save	When you save a program on a computer, you are telling the computer to remember all the work you've done so you can come back to it later and it will be just the same as you left it.

Skills I need:

- ·Create and follow a rhythm pattern using two different instruments
- ·Use the computer to generate different sounds represented by images
- ·Create a sequence of notes on the computer and start to refine them
