Computing Knowledge map
Programming quizzes

Vocabulary	
sequence	In programming, a "sequence" refers to the specific order in which instructions or commands are executed by a computer.
outcome	In programming, an "outcome" refers to the result or consequence of the code that has been written and executed.
design	Design in programming is planning a project This plan includes deciding how the program will look and work. Design helps make sure everything is organised and works well, so the final program is fun, easy to use, and does exactly what we want it to do.
algorithm	An algorithm is a set of instructions that tells a computer what to do to solve a problem or complete a task.
evaluate	In coding, evaluation helps the computer know what to do next by figuring out the result of certain instructions or conditions.
code	In the context of programming, "code" can be explained to children as a special set of instructions that tells a computer what to do.

Skills I need:

·Write and run a simple program with a start block, and an end block which changes the background

·Create and program a quiz with at least two backgrounds which switch based on an action

Identify errors in their program, and debug them
