Vocabulary	
Keyboard	A keyboard is a tool that you use to type letters and numbers into a computer.
Text Cursor	A text cursor is a small blinking line or shape on a computer screen that shows where the next letter or number you type will appear. It helps you know where you are in a document or text box so you can easily start typing, add new words, or make changes.
type	Typing is the process of using a keyboard to write letters, numbers, and symbols on a computer or other electronic device. It's similar to writing with a pencil on paper, but instead, you press keys that represent different characters.
spacebar	A spacebar is the long key on a computer or tablet keyboard that you press to create a space between words or letters when typing.
backspace	Backspace is a key on a computer keyboard that helps you erase or delete something you just typed.
format	Formatting involves choosing how the text looks, like picking the size and style of the letters (called the font), deciding where to place the words on the page, and adding things like headings, bullet points, or numbers to organize information.

Skills I need:

- Recognise some keys and use them to enter text on to a computer
- Add spaces between most words using a space bar
- Use the backspace key to delete text only as far as the section to be edited

Use the toolbar to find and use the bold, italic, and underline tool
