Data and Information

Vocabulary	
object	An object is anything that you can see or touch. These things are usually defined by their physical properties such as shape, size, and colour.
label	A "label" is like a sticker or tag that tells you something important about an object.
group	Group refers to the process of organizing or categorizing items, objects, based on shared characteristics or common attributes.
property	The "property of an object" refers to the characteristics or features that help describe and identify the object. These properties can include things like colour, shape, size, texture, and material.
data set	A data set is like a big collection of information that is grouped together so we can look at it and learn from it.

Skills I need:

-Group the same objects in more than one way
-Count how many objects are in group and identify which has more
-Record how many objects are in a group
-Group objects to answer a question
-Compare objects to group them explaining what has been found
