Computing Knowledge map
Programming - Beebots

Vocabulary	
Beebot	Bee-Bots are a programmable robot. They can be programmed by pressing buttons on its back to make it move forward, backward, turn left, or turn right.
direction	Direction is a way to explain which way something is going or where something is located. Directions can also be as simple as telling someone to turn left or right, move forward, or go backward.
command	A "command" is like when someone tells you to do something and expects you to do it.
algorithm	An algorithm is like a set of instructions or a recipe that tells a computer or a person how to do something step by step.
plan	A "plan" is like a map or a list that helps you know what to do and when to do it.

Skills I need:

-Run a command on a floor robot
-Build a sequence of commands in steps from a given starting point
-Combine commands in a program
-Run a program on a device
Debug a program to correct errors
-
